                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to nucleic acid molecules comprising altered HCV NS3 or HCV NS5 encoding region, or encephalomyocarditis virus (EMCV) internal ribosome entry site (IRES) region coding for one or more NS3, NS5, or EMCV IRES mutations, respectively. The location of the NS3, CNS5, or EMCV IRES mutations, respectively. The location of the expression vector comprising a nucleotide sequence coding for the altered nucleic acids, which is transcriptionally coupled to an exogenous promoter; (2) a recombinant cell human hepatoma cell comprising the altered nucleic acids; (3) a recombinant cell produced by introducing into a human hepatoma cell; (4) producing an HCV (hepatitis C virus) replicon enhanced cells made in the continuity. The HCV replicon, (5) an HCV replicon enhanced cells made in the continity HCV replicons and HCV replicon enhanced cells are useful in cutivity. The HCV replicons and HCV replicon enhanced cells are useful in cutivity. The HCV replicon and expression, and HCV and host cell continuing the ability of a compound to modulate one or more HCV continues of the measuring the ability of a compound to modulate one or more HCV activities e.g. to discover drugs which may treat HCV mediated diseases such as sliver failure, cirthosis and hepatocellular carcinoma. The present sequence is the HCV replicon Con 1, used as a basis for the adaptive mutations of the invention.

The location of the internal ribosome entry site (IRES) region coding for one or more NS3, contactions are detailed in the specification. Also included are mutations are detailed in the specification. Also included are cutations are detailed in the specification. Also included are mutations are detailed in the specification. Also included are comparable acids, which is transcriptionally coupled to an the altered nucleic acids, which is transcriptionally coupled to an exogenous promoter; (2) a recombinant cell human hepatoma cell cacids; (3) a recombinant cell produced by introducing the altered nucleic acids; (4) producing an expectation and hepatican acids; (3) an HCV replicon enhanced cells made in the continual HCV replicons and HCV replicon enhanced cells are useful in extractions, producing the ability of a compound to affect HCV cuteractions, producing HCV RNA and proteins, and providing as system interactions, producing HCV RNA and proteins, and providing as system continuities e.g. to discover drugs which may treat HCV mediated activities e.g. to discover drugs which may treat HCV mediated diseases such as liver failure, cirrhosis and hepatocellular carcinoma. The present sequence is an HCV replicon Con 1 mutant of the invention. Was created by the indexer using the HCV sequence appearing as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    243

New Hepatitis C virus (HCV) replicons comprising altered HCV NS3 or HCV NS5 encoding region, or encephalomyocarditis virus (EMCV) internal ribosome entry site (IRES) region, useful in studying HCV replication and expression -

Claim 9; Page -; 69pp; English.

The invention relates to nucleic acid molecules comprising altered HCV NS3 or HCV NS5 encoding region, or encephalomycoardities virus (EMCV) internal ribosome entry site (IRES) region coding for one or more NS3, NS5A, or EMCV IRES mutations, respectively. The location of the mutations are detailed in the specification. Also included are (1) an expression vector comprising a nucleocide sequence coding for the altered nucleic acids, which is transcriptionally coupled to an exogenous promoter; (2) a recombinant cell human hepatoma cell comprising the altered nucleic acids; (3) a recombinant cell produced by introducing the altered nucleic acids; (4) producing an exogenous promoter; (2) a recombinant cell produced by introducing into a human hepatoma cell the altered nucleic acids; (4) producing an every (hcy replicon enhanced cells made in the contributy. The HCV replicon enhanced cells are useful in structional HCV replicons and HCV replicon enhanced cells are useful in cativity. The HCV replicons and HCV replicon enhanced cells are useful in the studying HCV replication and expression, and HCV and host cell interactions, producing HCV RNA and proteins, and providing a system continues are producing HCV RNA and proteins, and providing a system continues such as liver failure, cirrhosis and hepatocellular carcinoma. The present sequence is an HCV replicon con 1 mutant of the invention. Note: The present sequence is not shown in the specification but was created by the indexer using the HCV sequence appearing as

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 /organism="Danio rerio"
